Aspiring Data Engineer | ...

One thing I've learned this semester is that understanding the logic behind a problem matters more than simply getting the code to work. While practicing C++ and Data Structures, debugging programs and working through problems helped me become more patient and systematic in my approach. I'm still learning, but each bug I fix gives me a better understanding of how to build solutions.

Couldnt agree more with this! Debugging and tackling data structures really forces you to slow down and focus on the underlying logic rather than just chasing a passing test case. Great insights—keep it up! [#BuildInPublic](#)
